WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The proportion of the average daily strength of the command which is confined to hospital or quarters (including patients evacuated from overseas) is given in the "Year-to-date" section of the summary table. The mean number of noneffectives per thousand strength shown in the weekly section of the summary table includes only patients admitted to hospital or quarters from activities in the Continental United States; these figures, therefore, are noneffective rates for troops stationed in the United States.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

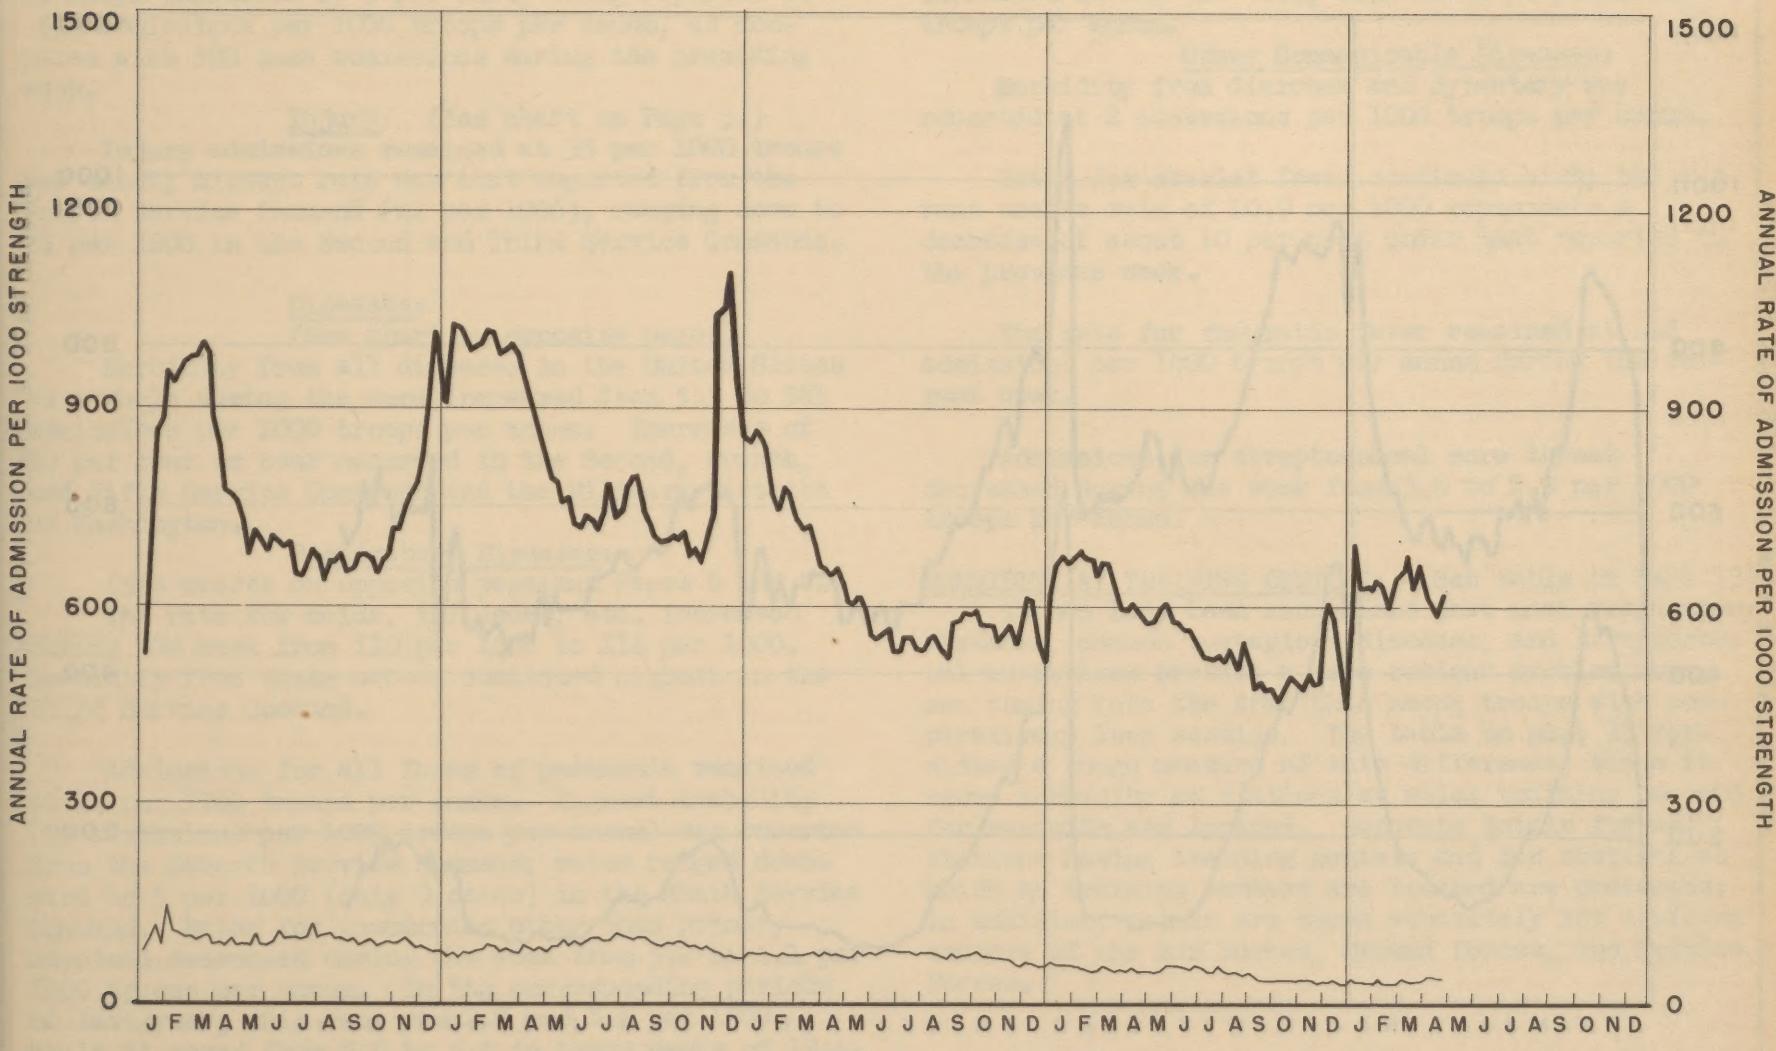

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (§) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes: (See chart on Page 3.)

Morbidity from all causes during the week ended 26 April increased by 5 per cent, being reported at 616 admissions per 1000 troops per annum, as compared with 588 such admissions during the preceding week.

Injury: (See chart on Page 3.)

Injury admissions remained at 35 per 1000 troops per annum; highest rate was that reported from the Fourth Service Command (42 per 1000), ranging down to 25 per 1000 in the Second and Third Service Commands.

Diseases:

(See chart on opposite page.)

Morbidity from all diseases in the United States as a whole during the week increased from 553 to 581 admissions per 1000 troops per annum. Increases of 10 per cent or over occurred in the Second, Fourth, and Fifth Service Commands and the Military District of Washington.

Respiratory Diseases:

(See charts on opposite page and Pages 6 and 7.)

The rate for colds, influenza, etc. increased during the week from 110 per 1000 to 114 per 1000. Morbidity from these causes continued highest in the Third Service Command.

Admissions for all forms of pneumonia remained at 14 per 1000 troops per annum. Highest morbidity (25 admissions per 1000 troops per annum) was reported from the Seventh Service Command; rates ranged downward to 5 per 1000 (only 9 cases) in the Ninth Service Command. Rates for pneumonias other than primary atypical decreased during the week from 5.2 to 4.1 per 1000 troops per annum. In the corresponding periods of last year, this rate was 2.9 and 2.6 per 1000, while it moved from 5.8 to 5.4 in these weeks of 1944.

Venereal Diseases:

Admissions for "new not-EPTS" venereal diseases increased during the week, from 82 to 87 per 1000 troops per annum.

Other Communicable Diseases:

Morbidity from diarrhea and dysentery was reported at 2 admissions per 1000 troops per annum.

Rates for scarlet fever continued high; the current week's rate of 10.9 per 1000 represents a decrease of about 10 per cent under that reported in the previous week.

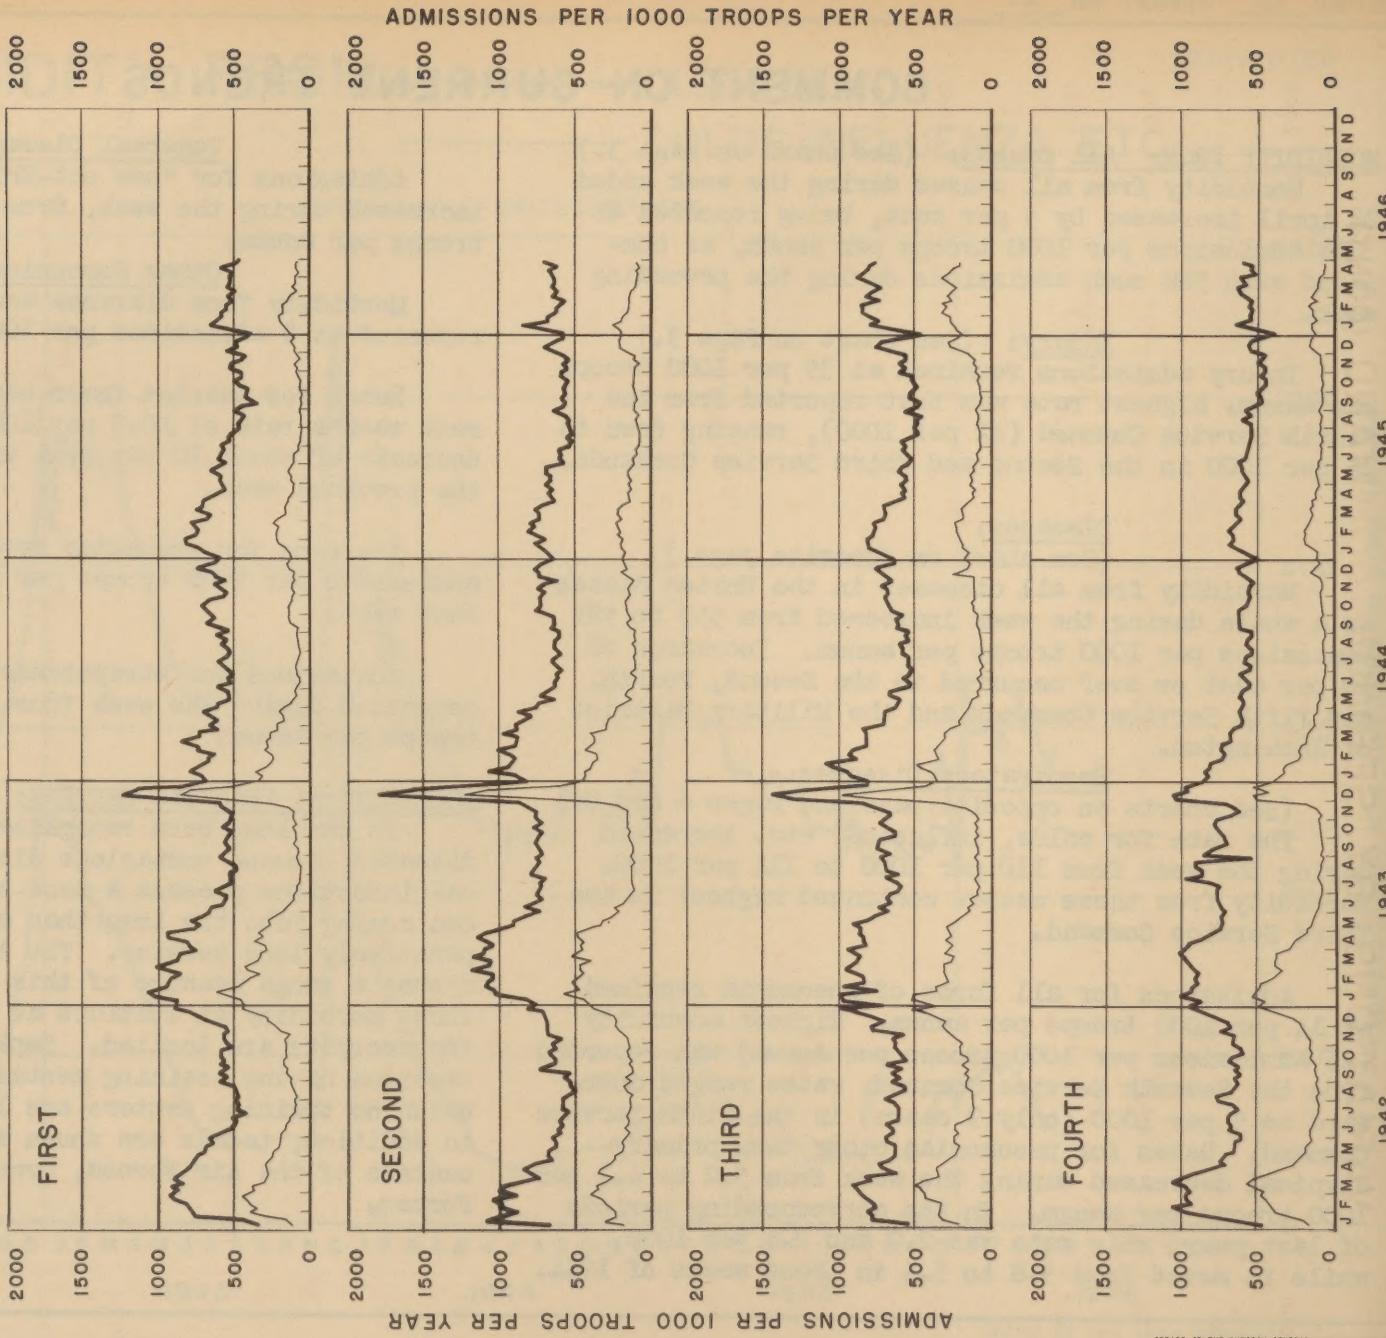

The rate for rheumatic fever remained at 4.2 admissions per 1000 troops per annum during the current week.

Admissions for streptococcal sore throat decreased during the week from 3.6 to 2.9 per 1000 troops per annum.

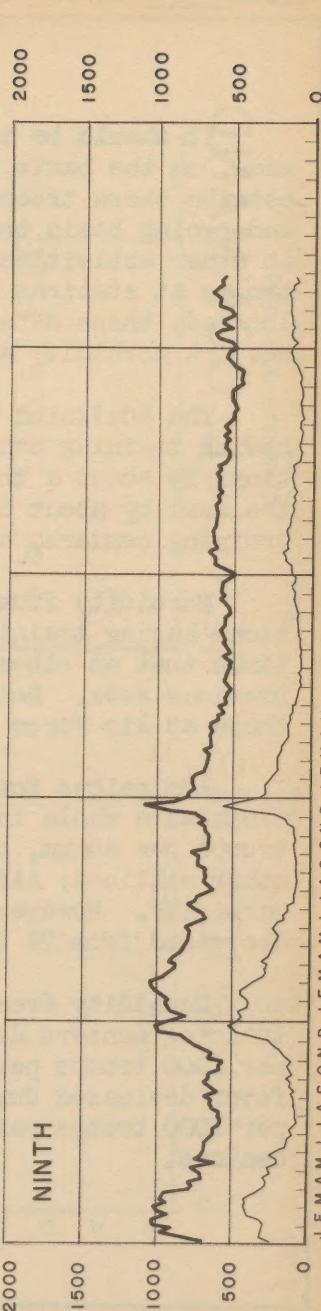

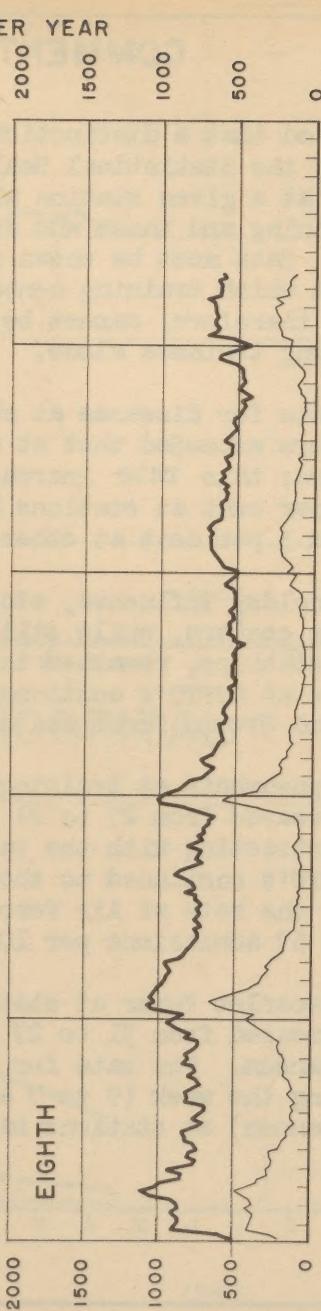

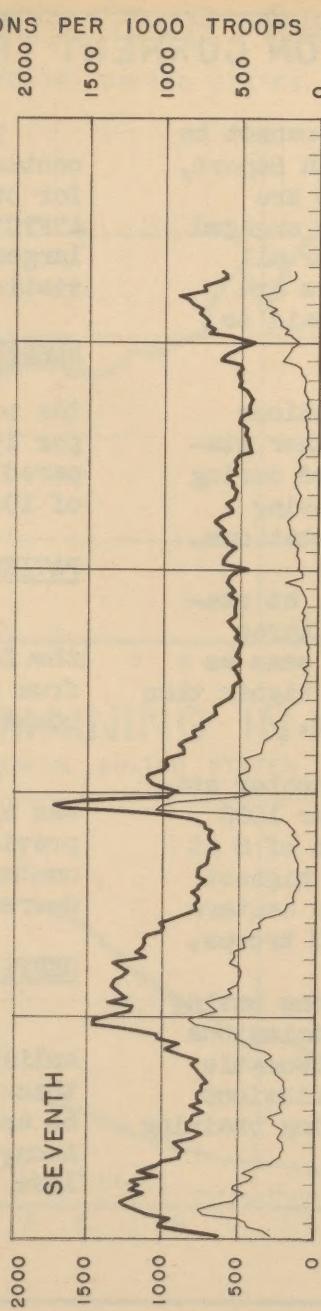

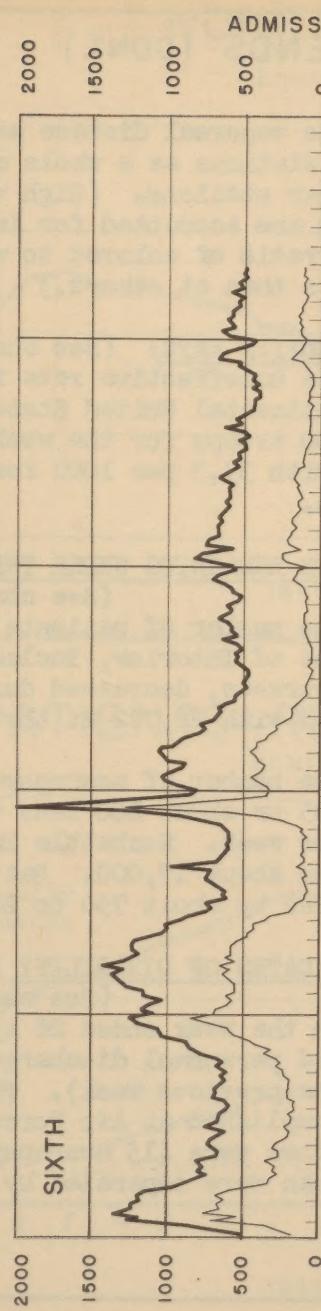

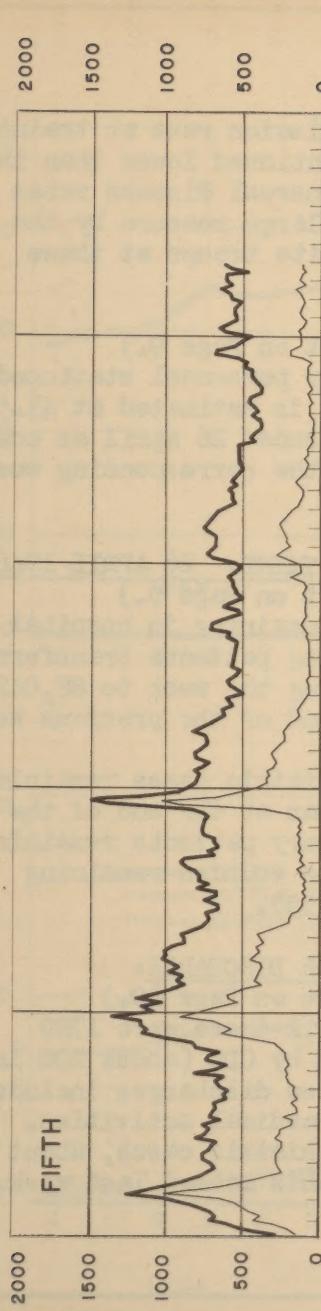

MORBIDITY AT TRAINING CENTERS: (See table on Page 13)

It has long been recognized that most respiratory diseases, common contagious diseases, and streptococcal infections present a more serious problem among men coming into the Army than among troops with comparatively long service. The table on page 13 furnishes a rough measure of this difference, since it shows morbidity at stations at which training centers for recruits are located. Separate totals for all stations having training centers and for stations at which no training centers are located are presented; in addition, totals are shown separately for training centers of the Air Forces, Ground Forces, and Service Forces.

COMMENT ON CURRENT TRENDS (CONT.)

It should be noted that a distinction cannot be made, on the basis of the Statistical Health Report, between those troops at a given station who are undergoing basic training and those who are engaged in other activities. Data must be shown for all troops at stations at which training centers are located; these data, therefore, cannot be said to measure morbidity among trainees alone.

The admission rate for diseases at stations having training centers exceeded that at other stations by about a third; this rate increased during the week by about 6 per cent at stations having training centers, and 5 per cent at other stations.

Morbidity from colds, influenza, etc., at stations having training centers, while still three times that at other stations, remained the same as previous week. Rates at ASFTC's continued higher than those at Air Force and Ground Force centers.

Admissions for pneumonia at training center stations as a whole increased from 27 to 29 per 1000 troops per annum, contrasting with the rate of 8 at other stations; AAFBTC's continued to show highest morbidity. However, the rate at Air Forces centers decreased from 79 to 57 admissions per 1000 troops.

Morbidity from scarlet fever at stations having training centers decreased from 31 to 27 admissions per 1000 troops per annum. The rate for rheumatic fever decreased during the week (9 to 7 admissions per 1000 troops per annum) at stations having training centers.

The venereal disease admission rate at training center stations as a whole continued lower than that for other stations. (High venereal disease rates at ASFTC's are accounted for in large measure by the larger ratio of colored to white troops at these stations than at others.)

NONEFFECTIVE RATE: (See chart on Page 9.)

The noneffective rate for personnel stationed in the continental United States is estimated at 41.5 per 1000 troops for the week ended 26 April as compared with 33.3 per 1000 for the corresponding week of 1945.

PATIENTS REMAINING UNDER TREATMENT: 26 APRIL 1946:

(See chart on Page 9.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 88,042 as compared with 92,792 at the end of the previous week.

The number of neuropsychiatric cases remaining was 6135 or about 200 less than at the end of the previous week. Nonbattle injury patients remaining numbered about 17,000. Battle wounded remaining decreased by about 750 to 20,550.

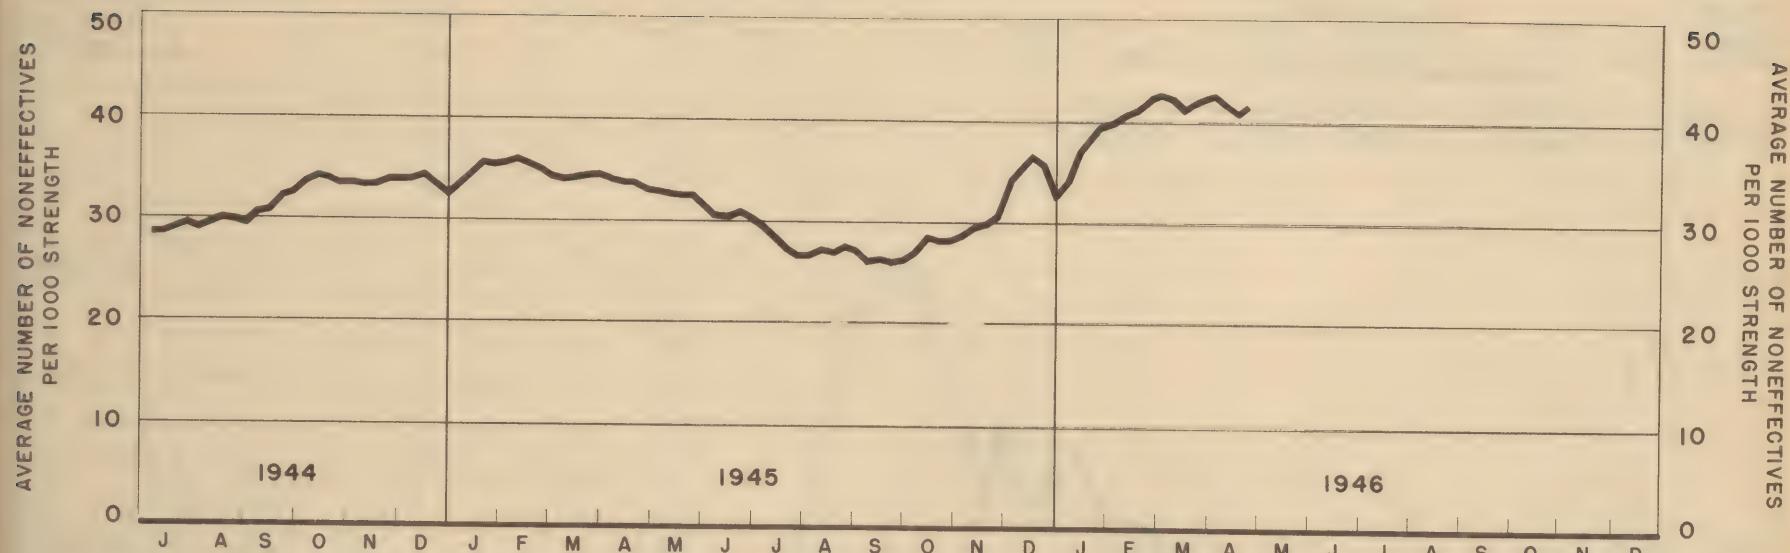

CERTIFICATES OF DISABILITY FOR DISCHARGE:

(See chart on Page 10.)

In the week ended 26 April there were 1789 enlisted personnel discharged by CDD (about 200 less than the previous week). These discharges included 66 accomplished at Air Force medical activities. Among them were 415 neuropsychiatric cases, about 65 less than were separated by this method last week.

FOR THE FIVE-WEEK PERIOD ENDED 29 MARCH 1946

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Form 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the five-week period ended 29 March 1946 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and colds, influenza, etc., are presented on page 22. Similar charts for specified diseases appear on pages 24 and 25. A chart showing mortality trends is presented on page 28. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the service commands is given on pages 29 and 30. The most pertinent morbidity data for individual stations are presented on pages 31 to 43. On pages 44 and 45 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this report as given on page 2. The term "month" in this report is used to denote the four- or five-week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

The admission rate for all causes for the Army in the continental United States increased to 653 during March from 622 in the previous month. The rate for diseases increased to 622 per 1000 per annum, while that for injuries rose from 29 in February to 31 in March.

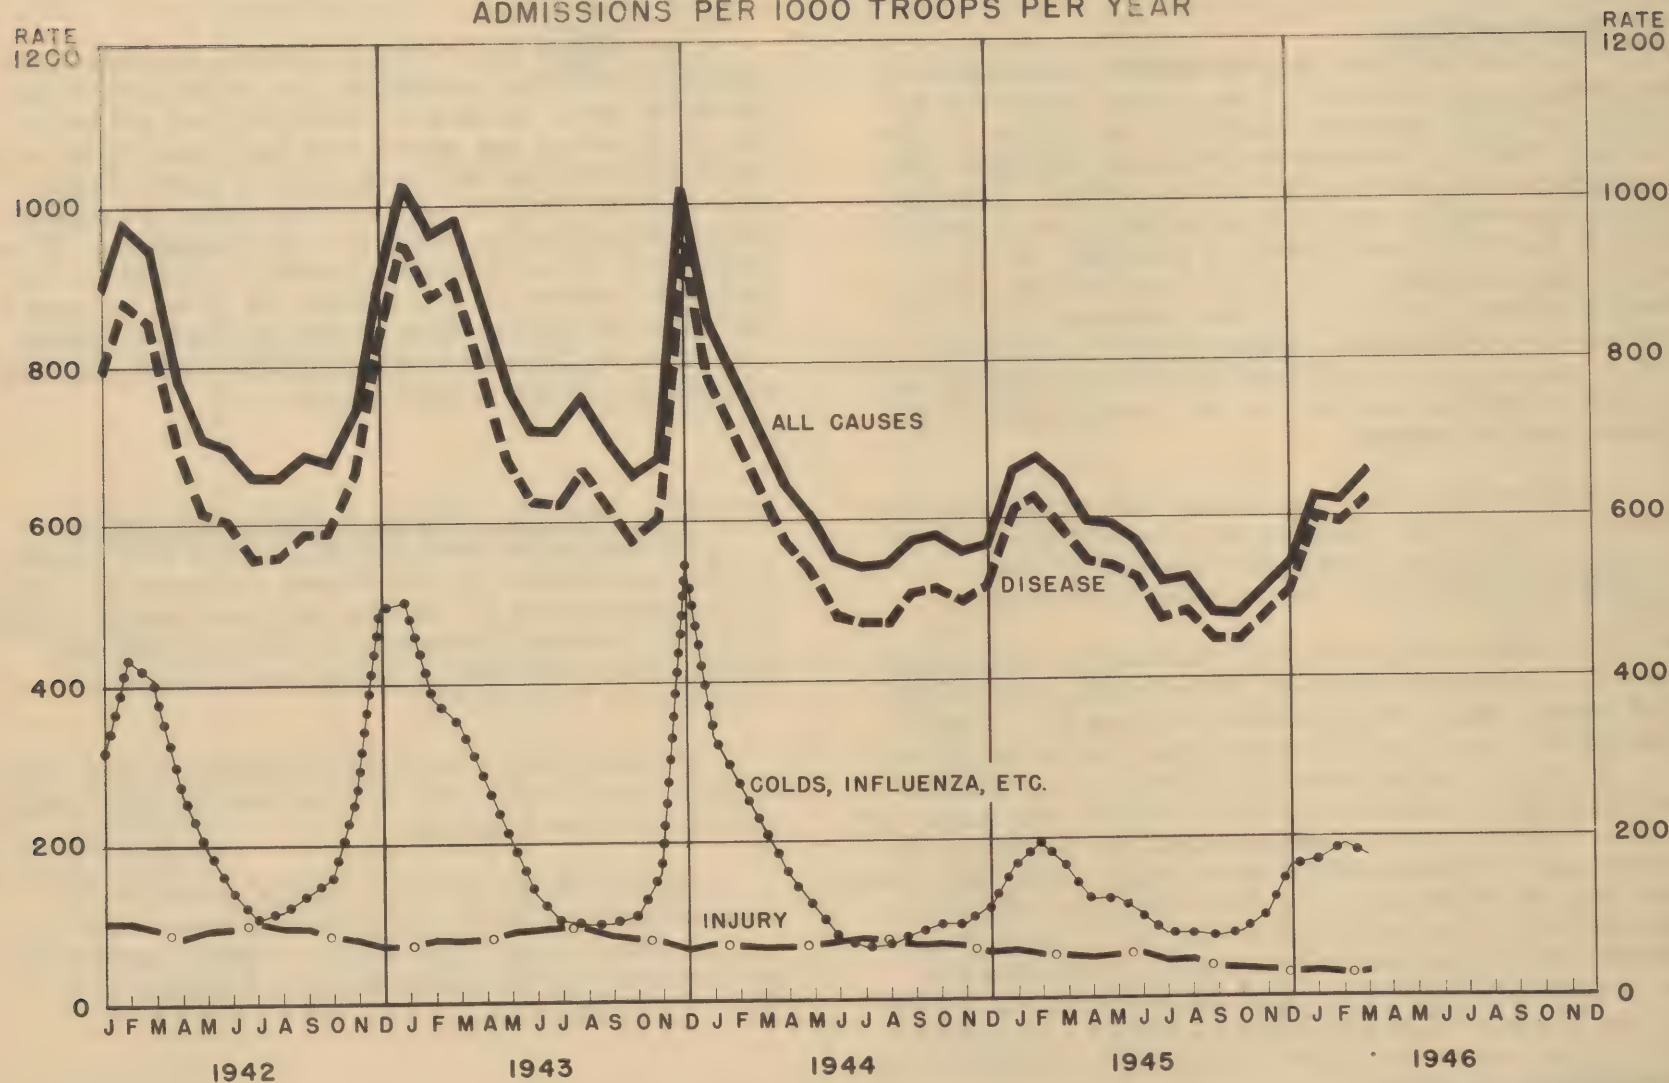

Disease admission rates increased during March by more than 10 per cent in the Fourth, Fifth, and Seventh Service Commands.

The admission rate for injury decreased or remained unchanged in all service commands except the Seventh, Eighth, and Ninth; highest morbidity was reported by the Ninth Service Command, with a rate of 36 per 1000.

ADMISSIONS PER 1000 TROOPS PER YEAR

COMMENT ON RECENT DEVELOPMENTS (CONT.)

RESPIRATORY DISEASES:

During March the admission rate for common respiratory diseases decreased from 191 per 1000 to 177. A rate of 167 per 1000 was reported for March 1945, while the rate in the same month of 1944 was 214 per 1000.

The lowest rates (101 and 109 per 1000 respectively) were reported by the First and Sixth Service Commands; highest (312 and 319 per 1000) from the Military District of Washington, and the Seventh Service Command. The only sharp increase occurred in the Seventh Service Command where the March rate was 15 per cent above that reported for February.

Morbidity from all forms of pneumonia decreased slightly, from 18.8 per 1000 in February to 17.4 in March as compared with 13.9 in March of last year, and 16.2 in 1944. Increases in these rates are observed in the Fourth and Sixth Service Commands.

Morbidity from atypical primary pneumonias in the United States as a whole decreased from 12.7 admissions per 1000 troops per annum in February to 11.8 in March, with increases being noted in the Second, Fourth, and Sixth Service Commands and the Military District of Washington.

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery fell from 3.0 per 1000 in February to 2.9 in March, the rates continuing much lower than those reported in the same periods last year. Only the Second Service Command reported a rate in excess of 5 per 1000 per annum.

VENEREAL DISEASES:

Reported admissions for venereal diseases, excluding cases contracted prior to entry into service, increased during the month to 82.3 per 1000 troops per annum, from 67.1 such admissions reported in February.

Morbidity represented by venereal EPTS cases was reported at 5.0 per 1000 during March as compared with 4.6 per 1000 in February. The average weekly number of venereal EPTS cases in March was 142 as compared with 155 in February.

SCABIES:

The admission rate for scabies increased from 7.0 in February to 8.4 per 1000 in March.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis was 3.9 per 1000 in March as compared with 4.3 in February.

MEASLES:

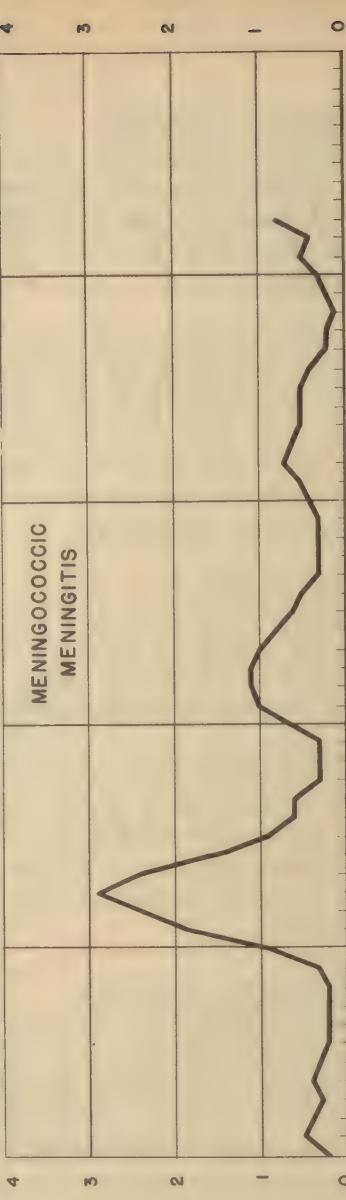

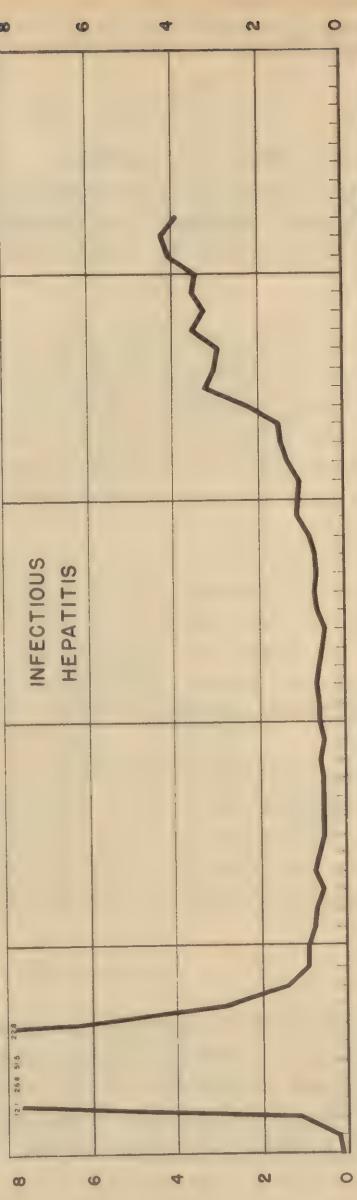

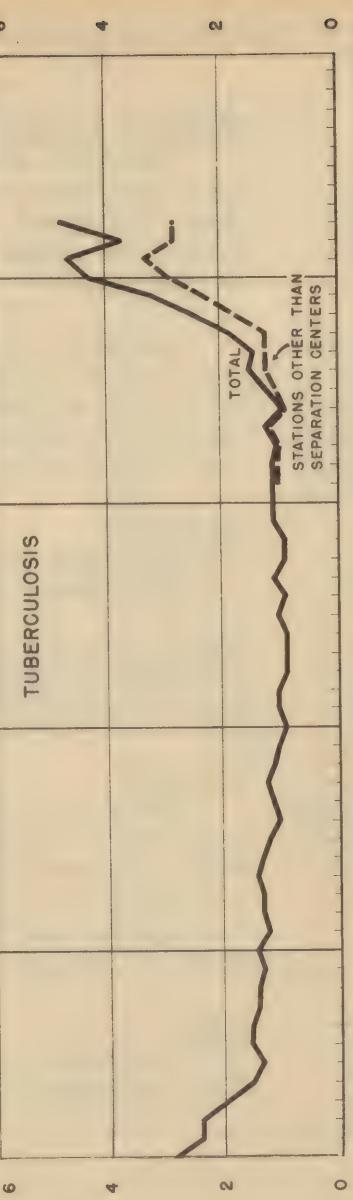

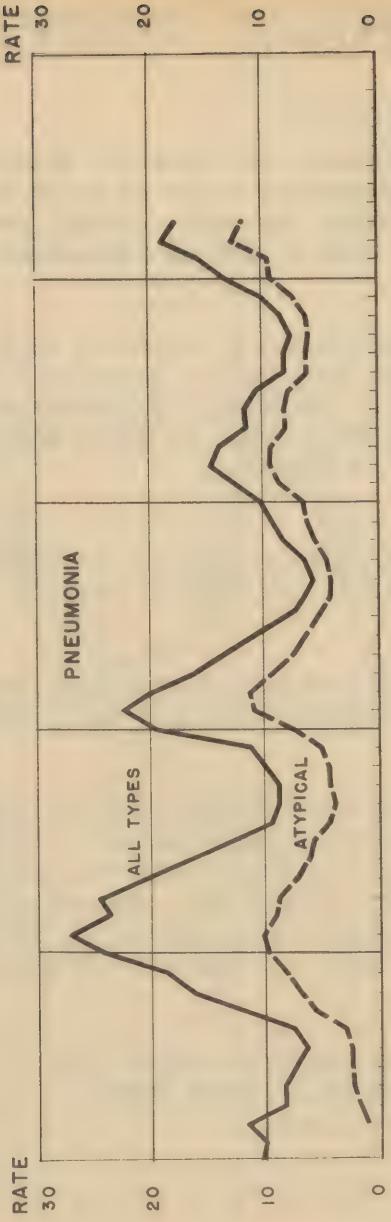

Morbidity from measles increased to 399 cases per week during March as compared with 294 weekly cases in February. The rate moved from 8.7 to 14.1 per 1000. In March of last year the admission rate for measles was 3.3 per 1000 per annum, while in March of 1944 the rate had reached 8.7 per 1000.

MUMPS:

Morbidity from mumps increased from 7.1 per 1000 in February to 11.3 during March.

COMMENT ON RECENT DEVELOPMENTS (CONT.)

SCARLET FEVER:

Morbidity from scarlet fever was reported at 14.7 per 1000 in March, as compared with 2.7 in March of last year, and 4.8 in 1944. The Military District of Washington reports the highest rate of 38.1 per 1000, while the lowest rate of 4.4 is noted in the Second Service Command.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis was reported at 0.8 per 1000 in March.

RHEUMATIC FEVER:

Morbidity from rheumatic fever increased to 2.8 per 1000, from 1.2 in February. The Military District of Washington reported the highest morbidity from this cause (10.9 per 1000).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 4.8 per thousand in March, as compared with 3.7 in February. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected.

As of 29 March there were 3658 cases of tuberculosis remaining under treatment in hospitals in this country. Of the total cases, 1088 were at Fitzsimons General Hospital and 881 at Bruns General Hospital.

MALARIA:

Morbidity from malaria acquired inside the United States was reported at 0.2 per 1000 in March. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 232 per week.

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders increased from 20.4 in February to 21.2 per thousand in March.

During March an average of 528 CDD's per week were given to enlisted men classified as neuropsychiatric cases; the weekly average for February was 729 such CDD's. CDD's in March for men with neuropsychiatric disorders represented 19 per cent of all CDD's, as compared with 18 per cent in February.

The number of neuropsychiatric cases remaining under treatment as of 29 March was 7207 or about 1500 less than at the end of February. On 29 March 2240 locked ward cases were remaining in hospital. Neuropsychiatric cases remaining represented 6.8 per cent of all patients in hospital.

MORTALITY:

Mortality from all causes during March was reported at 2.13 per annum per 1000 strength. The mortality rate from disease was 1.13 per 1000 in March while the reported mortality rate from injury increased from 0.80 to 0.94 per 1000.

COMMENT ON RECENT DEVELOPMENTS (CONT.)

It should be noted that the reporting of deaths on Form WD AGO 8-122 is not complete, particularly for deaths from injury, for which the understatement may be as great as 10 per cent (see Special Report on Deaths in 1944 in Weekly Health Report, Volume V, Report No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 1.03 per 1000, resulting in an estimated total death rate from all causes of 2.22 per 1000.

It is suggested that recent sharp increases in the death rate from diseases must be considered in the light of the rapidly diminishing number of Army troops in the United States and the accumulation of patients, particularly those suffering from tuberculosis, who cannot be as yet accepted by Veterans Administration hospitals. An analysis of these factors will be presented in this report in the near future.

NONEFFECTIVE RATE:

The estimated noneffective rate for Army personnel stationed in this country was about 43 per 1000 in March, as compared with 41 per 1000 reported for February.

ADMISSIONS TO HOSPITAL AND TO QUARTERS AND DISPENSARY:

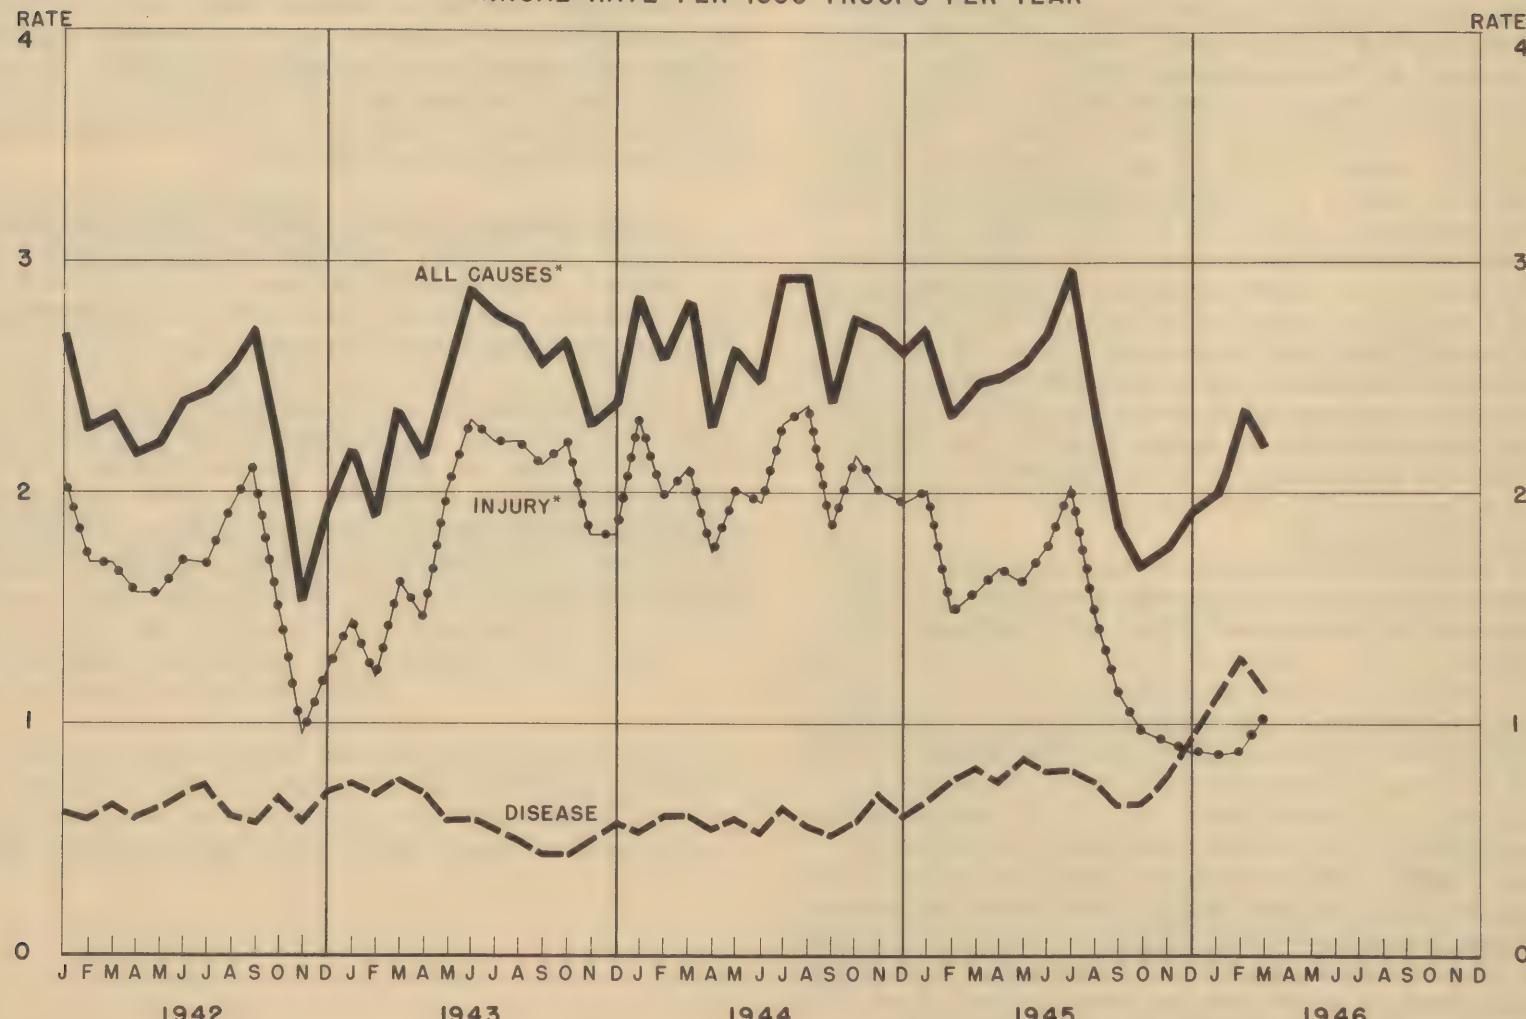

"Admissions" entered on WD AGO Form 8-122 include not only all Army personnel admitted to a medical installation and not returned to duty within the same day, but also certain cases which have been "Carded for record only" (deaths among Army personnel not currently under Army medical care, CDD's among personnel not currently excused from duty, and cases of venereal disease treated on an outpatient status which have not previously been treated for the same current condition by an Army medical installation as an Army case).

During March, of some 92,000 admissions entered on the forms, about 7100 were carded for record only. Of the 84,900 patients excused from duty, 78,600 were hospitalized immediately upon reporting themselves sick or after a period of treatment in quarters or dispensary, while the remaining 6300 patients were excused from duty in quarters or dispensary, but were not hospitalized during the month.

In February, of about 83,600 admissions reported on WD AGO Form 8-122, approximately 5400 were carded for record only, 78,000 were hospitalized, and 4800 were excused from duty in quarters or dispensary, but not hospitalized during the month.

Rates of admission to hospital (including transfers from quarters or dispensary) in February were: all causes, 546 per 1000 troops per annum; diseases, 518 per 1000; and injuries, 28 per 1000. In March, such admissions for all causes numbered 557 per 1000, while the rates for diseases and injuries were 529 and 28 respectively.
